INDEX.

Vol. II.

Acquired habits of animals rarely transmissible, page 48.
Adige, its delta increased by the system of embankment, 203.
Ælian, on the breeding of elephants in captivity, 46.
Africa, devastations caused by locusts in, 137.
— many species probably annihilated by the advance of the sands of, 166.
— dried carcasses of camels imbedded in the deserts of, 235.
— strata now forming off the coast of, 282.
African desert, its area as compared to the Mediterranean, 166.
Airthrey, a fossil whale found at, 279.
Algae, great depths at which some species live, 72.
— may leave traces of their form in calcareous mud, 278.
Alloa, whale cast ashore at, 278.
— fossil whale found near, 279.
Alluvium, stalagmite found alternating with in French caves, 222.
— imbedding of organic remains in, 228.
Alps, have been greatly raised during the tertiary epoch, 308.
Alternations of marine and fresh-water strata, how formed, 277.
America, specific distinctness of the animals in, and those of the Old World, 66, 87.
— domesticated animals have run wild in, 28, 153.
— rapid multiplication of domestic quadrupeds in, 152.
— number of plants common to the Old World, and, 69.
— number of square miles of useful soil in, 155.
Andes, may have undergone great changes of level in the last 6000 years, 265.
— effects which it is said would result from their sudden elevation, 279.
Animal kingdom, theory of the uninterrupted succession in the, 2.
Animal origin of limestone theory considered, 296.
Animal remains in caves and fissures 219.
Animals, Lamarck's theory of the production of new organs in, 7.
— imported into America have run wild, 28.
— aptitude of some kinds to domestication, 38.
— hereditary instincts of, 39.
— domestic qualities soon developed in some, 47.
— some of their qualities given with a view to their connexion with man, 41, 44, 47.
— their acquired habits rarely transmissible, 48.
— changes in the brain of the fetus in vertebrated, 62.
— their agency in diffusing plants, 76.
— their geographical distribution, 87.
— different regions of indigenous, 88.
— in islands, 90.
— their powers of swimming, 92.
— migrations of, 94.
— their power of crossing the sea very limited, 96.
— causes which determine the stations of, 130, 140.
— influence of society in altering the distribution of, 149.
— migratory powers indispensable to, 159.
— manner in which they become preserved in peat, 216.
— remains of those most common in peat mosses, 216.
— most abundantly preserved where earthquakes prevail, 230.
— imbedded by floods in Scotland, 230.
— imbedded by river inundations, 247.
— found imbedded in Scotch marl lakes, 251.
Animate creation, changes now in progress in the, 1.
Antagonist powers, synchronism of their action, 196.
Antiseptic property of peat, whence derived, 216.
Ants, their ravages in Grenada, 137.
Apennines, have been a vegetable centre whence species diffused themselves, 178.
— in great part elevated during the tertiary epoch, 308.
Aphides, White's account of a shower of, 114.
— their rapid multiplication, 135.
— ravages caused by, 136.
Aphonon, on the diffusion of man over the globe, 117.
Apure, river, wild horses drowned in great numbers by the annual floods of the, 249.
Aquatic and terrestrial species, their reciprocal influence, 138.
Aquatic species, embedding of their remains in subaqueous strata, 272.
Aqueous lavas in Campania, seven persons destroyed by, 236.
Arabian Gulf, rapidly filling with coral, 285.
Arctic region, on alterations of level in the, 309.
Ass, the, has run wild in Quito, 153.
— wild, account of their migrations in Tartary, 95.
Astrea, genus, instrumental in the formation of coral, 284.
Athabasca Lake, large shoal formed by drift-wood in, 242.
Atlantic, absence of circular coral groups in the, 291.
Aubenas, fissures filled with breccia near, 220.
Augustin, St., on a plague caused by locusts in Africa, 137.
Australia, the kangaroo and emu giving way in, 160.
— vegetation of, 178.
— extent of coral reefs off the coast of, 285.
Auvergne, tertiary deposits of, 304.

Barriers to the distribution of species, remarks on, 172.
Barrow, Mr., his account of a bank formed in the sea by the bodies of locusts, 138.
Barton, Mr., on the agency of insects in the fructification of plants, 54.
— on the geography of plants, 67.
Baumhauer, Mr., his account of a violent river-flood in Java, 250.
Bears, once numerous in Wales, 149.
— black, migrate in great numbers, 94.
Beaver, once an inhabitant of Scotland and Wales, 149.
— remains of the, found in shell-marl, in Perthshire, 251.
Bee, number of instincts of the, 58.
Beechey, Captain, on the drifting of canoes in the Pacific, 120.
— on the buried temple of Ipsambul, 234.
— on the rate of the growth of coral in the Pacific, 287.
— on the situation of the channels into the lagoons of coral islands, 293.
— on the superior height of the windward side of coral islands, 293.
— his description of Elizabeth or Henderson's Island, 297.
— on recent changes of level in the Pacific, 298.
Belcher, Captain, on the strata now forming in the sea off the coast of Africa, 282.
Belzoni, on the buried temple of Ipsambul, 234.
— his account of a flood on the Nile, 253.
Berkely, on the recent origin of man, 270.
Bewick, on the great geographical range of some birds, 101.
— on the distribution of the bustard in England, 150.
Bhooi, volcanic eruption at, during Cutch earthquake, 238.
Bigsby, Dr., on the North American lakes, 275.

Birds, diffusion of plants by, 80.
— geographical distribution of, 100.
— some species very local, 100.
— their powers of diffusion, 101.
— periodical migrations of, 101.
— great range of some species, 101.
— rate of the flight of, 102.
— frequently overtaken by hurricanes, 102.
— their agency in the distribution of fish, 106.
— many species of, unremittingly persecuted, 149.
INDEX.

Birds, recent extermination of some species of, 150.
— bones of in Gibraltar breccia, 223.
— rarity of their remains in new strata, 246.
Bisons, immense herds of, in the Mississippi valley, 93.
Bize, human remains found mixed with extinct mammalia in a cave at, 224.
Black cattle, their rapid multiplication in South America, 152.
Black Sea, marine tertiary strata found near the, 307.
Blavier, M., on the peat at the mouth of the Loire, 211.
Bloomfield, bursting of a peat moss near, 218.
Blown sand, imbedding of organic remains, &c. in, 234.
Boa constrictor, account of one conveyed to St. Vincent's on drift-wood, 104.
Boates, Dr., on Irish peat-bogs, 211.
Boblaye, M., on the formation termed céramique, in the Merea, 233.
Bog iron ore, whence derived, 214.
Bonaparte, C., on the birds common to Rome and Philadelphia, 101.
Bonelli, Professor, on the migrations of the painted lady butterfly, 113.
Bonpland, on the plants common to the old and new world, 69.
Bordeaux, timber destroyed by a beetle introduced by commerce at, 122.
Borneo, the orang-outang taught to ascend trees by the inhabitants of, 47.
Boston, a narwal found buried in mud on the beach near, 278.
Botanical geography, 67.
Botanical provinces, their number, 71.
— how caused, 125.
— why not more blended together, 127.
Bothnia, gulf of, its extent formerly much greater, 307.
Boyne, a large whale stranded at, 278.
Brand, Rev. J. F., on the birth-place of man, 117.
British vessels, average number wrecked annually, 254, 257.
— durable nature of many of their contents, 256, 257.
British coasts, cetacea frequently stranded on the, 278.
Brittany, a village in, buried under blown sand, 235.
— marine tertiary strata of, 305.
Brocchi, his remarks on the extinction of species, 128.
Broderip, Mr., on the agency of Islanda fragilis, in disseminating other species, 108.
Broderip, Mr., some large bulimi restored to life after twenty months' abstinence, by, 109.
Bromberg, a vessel and two anchors dug up near, 260.
Brongniart, M., his discovery of recent shells at considerable heights in Sweden, 306.
Brown, Mr., on the plants common to Africa, Guiana, and Brazil, 76.
— on the vegetation of New Holland, 178.
Buckland, Dr., on animal remains in caves, 219.
— on the remains of recent quadrupeds in fissures, 220.
— on stalagmite of caves, 222.
— on human remains in caves, 223.
— on the organic remains in the cave of Paviland, 223.
Buffaloes destroyed in great numbers by a river flood in Java, 250.
Buffon, on the want of specific identity in the animals of the Old and New World, 66.
— on the geographical distribution of animals, 67.
— on the check which the increase of one animal offers to that of another, 154.
— his remarks on the gradual extinction of species, 176.
Buildings submerged without being thrown down, examples of, 266, 269.
Bura and Helice, submerged Grecian towns, 269.
Burckhardt, buried temple of Ipsambul, discovered by, 234.
— his account of the carcasses of camels in the Libyan sands, 235.
Burnes, Lieut. A., his account of the effects of the earthquake of Cutch, 1519, 266.
Burnt island, whale cast ashore near, 278.
Burrampooter, bodies of men, deer, &c., conveyed to the sea by the floods of the, 250.
Burringdon, human remains found in a cave at, 223.
Burrowing shells secure from the ordinary action of the waves, 280.
Bustards recently extirpated in England, 150.
Bywell, bodies washed out of the churchyard of, by floods, 254.
Cabbages, examples of deviation from a common type shown in different races of, 33.
Cachalots, a herd of stranded at Kairston, in Orkney, 278.
Caernarvonshire, recent discovery of tertiary strata in, 305.
Calabria, animals how preserved in alluvium in, 230.
— animals engulfed in fissures in, 231.
Calcareous marl of the Scotch lakes, shells found in the, 272.
Calcareous formations of the Pacific, probably all stratified, 294.
— their great extent, 298.
Calcareous matter, the theory that it is on the increase controverted, 300.
Caldera of the isle of Palma, ravine in the, how formed, 292.
Callao, recent changes of level caused by earthquakes in, 265.
Camelus, the carcasses of imbedded in drift-sand, 235.
Campania, people destroyed by aqueous lavas in, 236.
Campbell, Mr., on the migration of quaggas in South Africa, 95.
Campion on the gradation in intellect as shown by the facial angle, 60.
Cannon inclosed in calcareous rock taken up from the delta of the Rhone, 262.
— account of one taken up near the Downs, 262.
Canoes full of men and women drifted to great distances, 119.
— eight found in draining Martin Meer, Lancashire, 260.
— several found in Loch Doon, 261.
Cape Langanes, drift-wood abundant at, 244.
Carcasses of camels in drift-sand, 235.
Carphyphyllia, coral formed by the genus, 284.
Caspinian, on the level of the, 163.
Caspius and Black Sea formerly connected by straits, 109.
Castle, Mr., on the ravages of ants in Grenada, 137.
Catalonia, devastation caused by torrents in, 199.
Catania, part of the town of overflowed by lava, 236.
— tools discovered in digging a well at, 259.
Cataclysms, remarks on general, 161.
Caterpillars, ravages caused by some kinds, 136.
Catodon, Ray’s account of a large one stranded in Holland, 276.
— a herd of them stranded in Orkney, 278.
Caves, organic remains in, may, in some cases, have fallen through fissures, 221.
— preserved by sediment introduced by land-floods, 221.
— alternations of sediment and stalagmite in some, 222.
— Dr. Buckland on human remains in, 225, 227.
— marine and terrestrial shells of estable species found in, 224.
Cayes, works of art found at a depth of twenty feet at, 259.
Central India, buried cities in, 237.
Céramique, account of the formation termed, 233.
Cetacea, their geographical range, 91.
— migrations of the, 99.
— identity of those found in the Mediterranean and Caspian Seas, 99.
— imbedding of their remains in recent strata, 278.
— often stranded on low shores during storms, 278.
— their remains should be more frequent in marine alluvium than those of land quadrupeds, 279.
Chagos isles, their linear direction, 286.
— openings into them in the opposite direction to the prevailing wind, 293.
Chalk of the north and south downs elevated after the commencement of the tertiary era, 305.
Chama gigas, time which it requires to attain its full growth, 287.
— found in the Pacific completely overgrown by coral, 287.
Chamisson, M., on the formation of coral islands, 284.
Channel into the lagoons of coral islands, how formed, 292.
Chara hispida, its structure described, see wood-cuts, No. 2 and 3, 273, 274.
Chara, fossilized in the lakes of Forfarshire, 273.
Chockier, three alterations of stalagmite and alluvium in a cave at, 222.
Christof, M. de, on human remains, &c. in caves, with extinct quadrupeds, 224.
Climate, its influence on the distribution of plants, 68.
— effect of alterations in, on the distribution of species, 169.
— its influence in causing one species to give way before another, 172.
— influence of vegetation on, 200.
— on the alteration which changes in physical geography may have caused in, 308.
Coal, formation of, at the mouths of the Mackenzie, 242.
Cotoni, land shells in breccia at, 220.
INDEX.

Colebrooke, Major R. H., on the formation of new islands in the Ganges, 203.
Columella, on the breeding of elephants in captivity, 46.
Conception, changes of level caused by earthquakes at, 265.
Cones formed on Etna in 1819 and 1811 (see frontispiece), 304.
Conservative influence of vegetation, 198.
Cook, Captain, on the diffusion of nutmeg seeds by pigeons, 80.
— on the drifting of canoes to great distances, 119.
Cook, Captain S. E., examined Brittany with the author, 306.
Coral, rate of the growth of, in the Pacific, 287.
— its growth probably varies according to the sites of mineral springs, 287.
— found between two lava currents in the West Indies, 294.
Coral animals, their action compared to plants which generate peat, 283.
— MM. Quoy and Guimard on the depth at which they live, 286.
Coral islands, formation of, 284.
— linear direction of, see wood-cut No. 4, 286.
— origin of the form of, 288.
— two sections explaining their form, see diagrams Nos. 6 and 7, 290.
— many probably the crests of submarine volcanos, 290.
— their windward side higher and more perfect than the other, 293.
Coral reefs, formation of, 283.
— great beds of oysters, &c., found on, in the Pacific, 283.
— genera of zoophytes by which they are constructed, 284.
— linear direction of, 286.
— rapidity of the growth of, 287.
— the most extensive formation now in progress, 298.
Cornwall, ruins of buildings found in the drift-sand of, 235.
Corse, Mr., on the habits, &c. of the elephant, 46.
Cowslip, Linnaeus on the varieties of the, 34.
Crantz, on the drift-wood of the North Sea, 244.
Creation, supposed centres, or foci, of 126.
Crocodile taken in the Rhone, 104.
Crocodiles imbeded by a river inundation in Java, 246.
Currents, distribution of drift-timber by, 245.

Curtis, Mr., on the ravages caused by aphides, 136.
Curtis, Mr. John, on the power of the tipule to cross the sea, 116.
— on insects in marl, 245.
Cutcher, effects of the earthquake of, in 1819, 265.
Cuvier on the variability in the same species, 25.
— on the varieties of the dog, 27.
— on identity of Egyptian mummies with living species, 30.
— on the migrations of the Spring-bok, 95.
— on the extinction of the Dodo, 151.
— on the durability of the bones of men, 258.
Cuvier, M. F., on the aptitude of some animals to domestication, 38.
— on the influence of domestication, 41.
Cypris found completely fossilized in Scotch marl lakes, 275.

Dangerfield, Captain F., on buried cities in Central India, 238.
Daubeney, Dr., his discovery of nitrogen in mineral springs, 189.
— his objection to the theory of the gradual civilization of man, 117.
— on the perishable nature of the works of man, 271.
Davy, Dr., on the changes which a helmet taken up from the sea near Corfu had undergone, 203.
Decandolle, his opinion respecting hybrid plants, 56.
— on the distribution of plants, 68, 71.
— on the agency of man in the dispersion of plants, 82.
— on the causes of stations of plants, 131.
— on the barriers which separate distinct botanical provinces, 177.
Decandolle, M. Alph., on the number of botanical provinces, 71.
Deer, their powers of swimming, 92.
— formerly very abundant in Scotland, 149.
— abundance of their remains in the Scotch marl lakes, 251.
Degouer on remains of ships, &c., in the Dutch peat mosses, 219.
Degradation of land, caused by rain, 199.
De la Beche, M., on the action of rain in the tropics, 200.
INDEX.

De la Beche, M., on the drifting of the lighter parts of plants to sea by hurricanes, 244.
— his remarks on the subsidence at Fort Royal, 269.
— on the coral formations of the West Indian seas, 291.
— on the alternation of coral and lava in the Isle of France, 295.
Delamétherie, speculative views of, 11.
Deville, wheat found in the Egyptian tombs by, 31.
— on the native country of the common wheat, 31.
Delta of the Ganges, alternations of marine and fresh-water strata formed in the, 277.
— of the Indus, recent elevation and depression of the, 277.
— of the Rhone, cannon inclosed in calcareous rock taken up from the, 262.
De Lac on the conversion of forests into peat mosses, 214.
Denudation caused by rain, 199.
Desert of Africa, its area as compared to that of the Mediterranean, 166.
Desjardins, M., bones of the dodo found fossil under lava by, 151.
Dikes numerous in the Val del Bove, Etna, 303.
Disappointment Islands, connected with Duff's group by coral reefs, 295.
Dislocations of strata, ancient and modern, remarks on, 195.
Distribution of species, effect of changes in physical geography on the, 160.
— effect of changes in climate on, 169.
Dodo, on the recent extinction of the, 159.
Dog; varieties of the, 26.
— its distinctness from the wolf, 27.
— hybrids between the wolf and, 51.
Dogs, Lamarck on the numerous races of, 7.
— examples of acquired instincts becoming hereditary in, 39.
— have run wild in America, 153.
— goats in Juan Fernandez destroyed by, 164.
Domestic qualities soon developed in some animals, but wholly denied to others, 47.
Domestication, aptitude possessed by some animals to, 38.
— influence of, 41.
Dominica, a bed of coral found between two lava currents in, 294.
Downham, part of the town of, overwhelmed by blown sand, 235.
Downs, account of a cannon taken up from the sea near the, 262.
Drift sea-weed, large banks formed by, 277.
Drift wood, a boa constrictor conveyed to St. Vincent's on, 104.
— on the imbedding of, 241.
— abundant in the North Sea, 244.
— conveyed in all directions by currents, 245.
Drumlanrig forest overturned by the wind in 1756, 212.
Duff's group, these islands connected with Disappointment islands by coral reefs, 295.
Dulverton, pigs found entire in digging a well at, 216.
Duncombe Park, bones of recent quadrupeds found in a fissure in, 220.
Dureau de la Malle, M., on the changes caused by man in different races of dogs, 26.
— on the aptitude of some animals to domestication, 38.
Dutch peat-mosses, remains of ships &c, found in, 219.
Dutch vessel found in the old channel of the river Rother, 260.
Earth's surface, effects produced by the powers of vitality on the, 185.
— permanent modifications produced by the action of animal and vegetable life on the, 209.
Earthquakes, animals most abundantly preserved where they prevail, 230.
— ravages caused by the waves of the sea on low coasts during, 232.
— in Sicily, 1693, several thousand people entombed at once in caverns, during, 232.
— effects of the submersion of land by, 264.
— their effects often unheeded, 267.
— their effects in imbedding cities and forests, 268.
— in the Pacific, 297.
Edrom, remains of the beaver found in the parish of, 251.
Edwards, his account of the destruction of the town of Savanna la Mar, 233.
Egypt, cities and towns buried under drift sand in, 234.
Egyptian mummies identical with species still living, 28.
Eider-ducks destroyed by a fox drifted on ice to the island of Vidoc, 145.
Ekmark, on the diffusion of plants by birds, 90.
Elephants, their sagacity not attributable to their intercourse with man, 46.
INDEX.

Elephants will breed in captivity, 46.
— their powers of swimming, 92.
Elevation, effects which would result in some places from partial, 163.
— recent, in the delta of the Indus, 266.
— and subsidence, effects of alternate, 307.
Elizabetli, or Henderson's Island described—see wood-cuts No. 8 and 9, 296, 297.
Elk Island, with 700 quadrupeds, swept away by a river-flood in Virginia, 250.
Emu in Australia will become exterminated, 150.
Equilibrium among plants kept up by insects, 132.
Eschscholtz's bay, cliffs consisting of ice and vegetable mould in, 194.
Escrinet, Pass of, conglomerate now forming at, 221.
Estuaries, imbedding of fresh-water species in, 276.
— description of the manner in which they become filled up, 276.
Etna, fourteen towns and villages covered at once by the lava of, 236.
— general dip of the volcanic beds of, 305.
— lava currents of 1819 and 1811, on, 304.
— recent cones formed on, 304.
Extermination of species, no prerogative of man, 156.
Extinction of species, successive, part of the economy of nature, 168, 176.

Facial angle, on the gradation in intellect, as shown by the, 60.
Féroussac on the distribution of fresh-water molluscs, 108.
Finland, Gulf of, its connexion with the White Sea, 306.
Fish, their geographical distribution, 105.
— migrations of, 106.
— agency of birds and water-beetles on their distribution, 106.
Fissures, preservation of organic remains in, 220, 231.
— on their communication with caverns, 221.
Fleming, Dr., on the rapid flight of birds, 102.
— his account of turtles taken on the coast of England, 104.
— on the changes in the animal kingdom, caused by the increase of human population, 148.
— his account of the stranding of cetacea on the British coasts, 278.

Flinders, a reef of coral 350 miles long, described by, 285.
Floating islands within the tropics, animals transported by, 97.
Floods in Scotland, 1794, 243.
— 1829, 249.
Forests, degradation of land increased by their destruction, 198.
— rain diminished by the felling of, 200.
— of America, cause of their position, 201.
— sites of many ancient ones now covered by peat, 206, 211.
— sometimes overturned by storms, 212.
— in Germany destroyed by insects, 206.
— submarine, remarks on their formation, 268.
Forfarshire Lakes, shell marl deposits, how formed in the, 272, 299.
— charæ found fossilized in the—see wood-cuts No. 2 and 3, 273, 274.
— skeletons of animals numerous in the, 251.
Formation of coral reefs, 283.
Fort of Sindree, subsidence of, in 1819, 266.
— not thrown down by the earthquake, 266.
Forth, effects of a storm in its estuary, Feb. 1831, 280.
Fournel on the occurrence of iron in all compact woods, 215.
Fox man-of-war, changes which some articles, thrown up from the wreck of the, had undergone in 33 years, 262.
France, human bones and works of art found with extinct quadrupeds, in the south of, 224.
— number of ships of war lost during the last war with, 256.
Franklin, on a whirlwind in Maryland, 74.
Fresh-water formations, recent, not yet examined, in the tropics, 275.
— the variety of species of testacea but small in, 277.
Fresh-water and marine strata, alternations of, how formed in the delta of the Ganges, 277.
Freshwater plants and animals, imbedding of their remains in subaqueous strata, 272, 275.
Fries, on the dispersion of cryptogamic plants, 76.
Frisi, on the conservative influence of vegetation, 198.
Frogs, conveyed to the sea in great numbers by floods, in Morayshire, 246.
Frontispiece described, 303.

Gaimard, M., on the depth at which the zoophytes, that form coral, live, 286.

Gambier Island, its windward side highest, 293.

Gambier’s group, rate of the growth of coral in, 287.

— volcanic rocks found in the lagoons of, 291.

Gamma moth, ravages caused by the caterpillars of the, 136.

Ganges, islands formed by the, 203.

— bodies of men, deer, and oxen conveyed to the sea by the floods of the, 250.

— bones of men found in the delta of the, 258.

— alternations of marine and freshwater strata, how formed in its delta, 277.

Gases, two of different gravities, will become uniformly diffused, 183.

Genera, Linnaeus on their real existence, 19.

Geographical distribution of species, on the laws which regulate the, 66.

Geographical distribution of plants, 67.

— of animals, 87.

— of cetacea, 91.

Geography of plants, 67.

Geological causes divisible into two great classes, 209.

Gerard, M., on the peat of the valley of the Somme, 219.

Germany, forests destroyed by insects in, 206.

Gibraltar, birds’ bones found in breccia at, 223.

— and Ceuta, shelly strata forming at great depths between, 281.

Gmelin on the agency of birds in the distribution of fish, 106.

Goats, rapid multiplication of, in South America, 153.

— in Juan Fernandez, destroyed by dogs, 154.

Godman on the migrations of the reindeer, 97.

Graves, Lieut., some bulimi brought to England by, recovered after twenty months’ abstinence, 109.

— on the diffusion of insects by the wind, 115.

Graves, Mr., on the distribution of the bustard, 150.

Greenland, timber drifted to the shores of, 244.

Grenada, sugar-canies destroyed by ants in, 137.

Greville, Dr., on some remarkable accumulations of drift sea-weed, 78.

Guadeloupe, human skeletons imbedded in calcareous rock in the island of, 259.

Guilding, Rev. L., his account of the arrival of a boa constrictor in St. Vincent’s, on drift wood, 104.

Guldenstäd, on the distinctness of the dog and wolf, 28.

Gulf of Bothnia, its extent formerly much greater, 307.

Gulf of Finland, its geological connexion with the White Sea, 306.

Gulf-stream, great area over which plants are drifted by the, 76, 243.

Gull-stream, account of a cannon taken up in the, 262.

Gun-barrel, with shells attached, found in the sands near St. Andrew’s, 263.

Gyrogonite, or petrified seed-vessel of charn, described—see wood-cut No. 2, 273.

Habitations of plants described, 69.

Habits of animals, when acquired rarely transmissible, 48.

Hamilton, Sir Charles, on the submerged buildings of Port Royal, 269.

Happisburgh, remarks on the so-called submarine forest of, 268.

Harris, Hon. A., on the effects of the foundering of a vessel off Poole harbour, 260.

Hatfield moss, trees of vast size found in, 213.

Helice and Bura, submerged Grecian towns, 269.

Helix, extensive range of some species of, 109.

— some species of very local, 109.

Helmet, changes which one taken up from the sea near Corfu, had undergone, 263.

Henderson on the drifting of the polar bear to Iceland, 143.

Henderson’s Island described—see wood-cuts No. 8 and 9, 296, 297.

Henslow, Rev. Prof., his experiments on the cowslip, 35.

— on the diffusion of plants by birds, 80.

Herbert, Hon. Mr., on some remarkable varieties in plants, from a common stock, 34.

— his experiments on the cowslip, 34.

— on hybrid plants, 56.

Herschell, Mr., his remarks on a change of climate, 309.

Hilaire, M. Geof. St., on the uninter-
INDEX.

ruptured succession in the animal kingdom, 2.
Hoff, M. Von, on human remains in the delta of the Ganges, 258.
— his account of a buried vessel between Bromberg and Nakel, 260.
Hogs, rapid multiplication of, in South America, 153.
Holland, the *teredo navalis* brought by ships to, 122.
— submarine peat found in, 278.
— a large cachalot stranded on the west coast of, in 1598, 278.
Hooker, Dr., on the drifting of a fox on ice, 145.
Horsburgh, Capt., his description of the Maldives Islands, 285.
— on the situation of the channels into the lagoons of coral islands, 293.
Horses, the amble hereditary in some, 44.
— numerous, in a wild state in Mississippi valley, 152.
— wild, annually drowned in great numbers in South America, 249.
Horsfield, Dr., on the distribution of the *Mydaus meliceps* in Java, 95.
Horticulture, changes in plants produced by, 32.
Human bones, changes which some have undergone in fourteen or fifteen centuries, 225.
Human remains in peat mosses, 215.
— in caves, 223.
— their durability, 258.
— found in the delta of the Ganges, 258.
— found in calcareous rock at Guadaloupe, 259.
Humboldt on the training of monkeys to ascend trees, 47.
— on the distribution of species, 67.
— on the plants common to the Old and New World, 69.
— on the distribution of animals, 88.
— on the periodical migrations of American water-fowl, 102.
— on the drifting of insects by the wind in the Andes, 114.
— on the rapid multiplication of domestic quadrupeds in America, 152.
— on the comparative size of the African desert and the Mediterranean, 166.
— origin of beings said by him not to belong to zoological geography, 179.
— his account of the annual drowning of wild horses in South America, by river floods, 249.
Humming-birds peculiar to the New World, 100.
Humming-birds, found by Captain King in the Straits of Magellan, in the depth of winter, 100.
— some species very local, 100.
Hunter, John, on mule animals, 50.
— on the identity of the dog, wolf, and jackal, 50.
Hunter, Mr., his account of the buried city of Ouejin, 237.
Huron, Lake, strata containing recent shells, found on the shores of, 275.
Hurricanes, many of them connected with submarine earthquakes, 232.
— leaves of plants drifted out to sea by, 244.
Huttonian theory, remarks on the, 196.
Hybrid races, Lamarck on the origin of, 10.
Hybrids, phenomena of, 49.
— sometimes prolific, 49.
— John Hunter's opinion on, 50.
— not strictly intermediate between the parent species, 51.
— between the dog and wolf, 51.
— among plants prolific through several generations, 52.
— rare among plants in a wild state, 54.
— difficulties attending their propagation, 59.
Hydrangea hortensis, influence of soil on the colour of its petals, 34.
Hydrophytes, distribution of, 72, 78.
*Ianthis fragilis*, its extensive range, 108.
— an active agent in disseminating other species, 108.
Icebergs, plants transported by, 77.
Ice-flows, drifting of animals on, 97.
Iceland, the polar bear frequently drifted from Greenland to, 143.
— rein-deer imported into, 154.
Igneous action, remarks on its intensity at different epochs, 194.
Igneous causes, the real antagonist power to the action of running water, 194.
Imbedding of organic remains in deposits on emerged land, 209.
— in peat mosses, 215.
— in caves and fissures, 219.
— in alluvium, and the ruins caused by landslips, 228.
— in volcanic formations on the land, 236.
— in subaqueous deposits, 239.
— by river inundations, 247.
— in recent marl-lakes in Scotland, 251.
Impériouse, coral reef, 294.
INDEX.

Imrie, Major, on the Gibraltar breccia, 223.
India, buried cities in Central, 237.
Indians of North America will become exterminated, 175.
Indus, recent alterations of level in its delta, 265, 277.
Inorganic causes, their influence in changing the habitations of species, 158.
Insects, the fructification of plants greatly assisted by, 54.
—— geographical distribution of, 112.
—— migrations of, 113.
—— certain types of, distinguish particular countries, 114.
—— diffused by the wind, 115.
—— disseminated by animals, birds, river-floods, &c., 116.
—— power of some kinds of to cross the sea, 116.
—— destructive to timber, introduced by commerce, 122.
—— parasitic, 122.
—— their numbers kept down by other insects, 133.
—— peculiarity of their agency in preserving an equilibrium of species, 134.
—— rapid propagation of some kinds of, 135.
—— imbedding of the remains of, 245.
—— only preserved under peculiar circumstances, 246.
Instincts of the bee, 58.
Instincts, migratory, occasional development of in animals, 93.
—— new ones, which have become hereditary in some animals, 93.
—— modified by domestication, 44.
Ipsambul, buried temple of, 234.
Ireland, tradition of the destruction of the reptiles of, by St. Patrick, 103.
—— its flora but little known, 103.
—— area covered by peat in, 211.
—— trees of great size found in the peat of, 212.
—— human body found in peat in, 215.
—— cattle lost in great numbers in the bogs of, 217.
—— testacea found living at great depths off the N. W. coast of, 282.
Iron, common in all compact woods, 215.
—— ore in peat, whence derived, 214.
—— instruments, account of some taken up from the bottom of the sea, incrased in conglomerate, 262.
Islands, vegetation of, 70, 227.
—— the migration of plants aided by, 77.
—— animals found in, 90.
Islands of the Pacific, animals found in, 90.
—— coral, manner in which they are formed, 284.
—— of drift wood, with trees growing on them, discovered at sea, 98.
Isle of France, alternation of coral and lava seen in the, 295.
Isthmus of Sloswick, action of the sea on the, 165.
—— effects which would result from its destruction, 165.
Italian peninsula, in great part elevated since present marine species were in being, 178.
Jamaica, seeds drifted to Europe from, 76.
—— subsidence in the harbour of Port Royal in, 161, 264.
—— rain diminished in, by the felling of forests, 200.
—— a town in, swept away by the sea, 233.
James, Mr., on the herds of bisons in the Mississippi Valley, 93.
Java, imbedding of the remains of reptiles in, 246.
—— animals destroyed by river-floods in, 250.
John de Mayen, drift wood on the island of, 244.
Juan Fernandez, goats destroyed by dogs in, 154.
Kamtschatka, migrations of rats in, 94.
Kangaroo is giving way before the progress of society in Australia, 150.
Keith on the dispersion of seeds by rivers and torrents, 76.
King, Mr., on the number of cattle lost in bogs in Ireland, 217.
—— his account of a cannon taken up from the Downs, 202.
King, Capt. P., on the coral reefs of New Holland, 285, 294.
Kinnordy, Loch of, remains of insects found in marl in the, 245.
Kirby, Rev. Mr., on the instincts of the bee, 58.
—— on the distribution of insects, 113.
—— on the dissemination of insects by river-floods, 116.
—— on the rapid propagation of some insects, 135.
—— on the devastations caused by ants in Grenada, 137.
Knight, Mr., on the wearing out of garden varieties of fruit, 33.
Kölreuter, his experiments on hybrids, between two species of tobacco, 52.
König, Mr., on the rock in which the human skeletons from Guadalupe are imbedded, 259.
Kotzebue, his account of a canoe drifted 1600 miles, 119.
—— on the formation of coral islands, 284.
Krantz on the migrations of seals, 99.

Labrador, drift timber carried to the shores of, 244.
Laccadive Islands, their linear direction, 245.
Lacépède on identity of Egyptian mummies with living species, 30.
Lagoons of coral islands, volcanic rocks sometimes found in them, 291.
—— cause of the narrow opening into the, 291.
—— the entrances into them always on the leeward side, 293.
Lake, formed by subsidence in the delta of the Indus, 1819, 266.
—— has become more salt than the sea, 267.
Lakes of North America, animals inhabiting them would be destroyed if they were drained, 168.
—— strata containing recent shells formed by the, 275.
Lamantin cast ashore near Leith, 278.
Lamarck, his definition of the term species, 3.
—— his theory of the transmutation of species, 3.
—— on the origin of the cultivated wheat, 6.
—— on the numerous races of dogs, 7.
—— on the production of new organs in animals, 7.
—— on the origin of hybrid races, 10.
—— his theory of progressive development, 11.
—— on the conversion of the orang-outang into the human species, 14.
—— on identity of Egyptian mummies with living species, 30.
—— answer to his objection as to the native country of wheat, 31.
—— on the power of species to modify their organization, 169, 173.
—— on the abundance of polyps in the ocean, 181.
Lamouroux on the distribution of hydrophytes, 72.
Lancashire, eight canoes found in draining a lake in, 260.
—— recent discovery of a bed of tertiary shells in, 306.

Land has increased in the northern hemisphere since the commencement of the tertiary era, 307.
Landalips, imbedding of organic remains in the ruins caused by, 229.
—— villages and their inhabitants buried by, 229.
Lapland, migrations of squirrels in, 94.
Latham on the great geographical range of some birds, 101.
Latreille on the geographical distribution of insects, 112.
Lauder, Sir T. D., his account of pigs swimming to great distances, 92.
—— his account of the number of frogs carried down to the sea by the floods in Morayshire, 246, 249.
—— on the imbedding of animals by floods in Scotland, 290.
Lava currents, of 1819 and 1811, of Etna, described — see Frontispiece, 304.
Lawrence on the causes which enable man to live in all climates, 62.
Leigh, his account of canoes found in draining Martin Meer, 290.
Lemings of Scandinavia migrate in vast numbers, 94.
Lesley on the former abundance of deer in Scotland, 149.
Lesueur on the geographical distribution of fish, 165.
—— on the distribution of zoophytes, 111.
Lewes, state of some human bones found in a tumulus near, 225.
—— estuary of the Ouse recently filled up near, 275.
—— Levels, indusia found in the blue clay of, 245.
Lichens, height at which they can grow, 75.
Lignite, wood probably converted into, more rapidly under great pressure, 261.
Limestone, the theory that it is all of animal origin, considered, 296.
Linley on the dispersion of cryptogamic plants, 75.
Linear direction of coral islands, 286.
Linnaeus on the constancy of species, 3.
—— on the real existence of genera in nature, 19.
—— on the distribution of seeds by animals, 79.
—— on the diffusion of plants by man, 83.
—— on the original introduction of species, 125.
Lisbon, subsidence of the quay at, 195, 264.
Lloyd's lists, number of vessels wrecked between 1793 and 1829, as shown by, 257.
Loch Doon, seven canoes found in, 261.
Loch Fithie, why no marl formed in, 290.
Loch Marlie, remains of the beaver found in, 251.
Loch of Kinnordy, remains of insects found in marl in the, 245.
Locusts, devastations caused by, 137.
— a great bank formed in the sea by their dead bodies, 138.
London basin, tertiary deposits of the, 305.
Louch, M., on the migration of the painted lady butterfly, 114.
Lowe, Mr., on the land-mollusca of Madeira and Porto Santo, 109.
Lybian sands, caravans overwhelmed by the, 235.
Lyon, Capt., on the imbedding of the carcasses of camels in the African sands, 235.
Macculloch, Dr., on the gradation from peat to coal, 211.
— on the occurrence of tannin in peat, 216.
— his theory that all limestone is of animal origin considered, 296.
Mackenzie, Sir G., on the importation of the rein-deer into Iceland, 154.
Mackenzie river, accumulation of vegetable matter in, 241.
— beds of wood-coal found on its banks, 242.
— cause of the abundance of drift timber in, 243.
Maclaren on the quantity of useful soil in America, 165.
— on the position of the American forests, 201.
Maculre, Mr., on the alternation of coral and lava in the West Indies, 294.
Madagascar, great extent of coral near, 206.
Majendie, M., on the faculty of the retriever, 40.
Malabar, a great sea of coral near, 265.
Malcolm, Sir J., on the buried cities in central India, 238.
Maldives, description of the chain of coral islands called the, see Wood-cut, No. 4, 205, 206.
Malte-Brun on the verdant rafts of the Mississippi, 96.
— his account of a crocodile taken in the Rhone, 104.
— on the geographical distribution of fish, 106.
Malte-Brun on the diffusion of man, 119.
— on destructive insects introduced by commerce, 122.
— on the level of the Caspian, 163.
— on the destruction of villages by landslips, 229.
— on the burying of villages under blown sand, 235.
— on the abundance of drift wood in the North Sea, 244.
— on the drifting of bodies to the sea by the Ganges, 250.
— on the coral reefs of the Pacific, 295.
Mammalia, different regions of indigenous, 88.
Man, Lawrence on the causes which enable him to live in all climates, 62.
— his agency in the dispersion of plants, 62.
— geographical distribution and diffusion of, 116.
— speculations on the probable birthplace of, 116.
— his involuntary influence in diffusing animals and plants, 121.
— changes caused by, 146.
— recent origin of, 155, 270.
— effects of the diffusion of, 155.
— power of exterminating species no prerogative of, 156.
— his influence in modifying the physical geography of the globe, 202.
— imbedding of the remains of, and his works, in subaqueous strata, 253.
— circumstances under which his remains may be preserved in recent deposits, 265.
— perishable nature of the works of, 271.
Mantell, Mr., on the superior solidity of human bones from a Saxon tumulus to those in a recent skeleton, 225.
— remains of insects found in Lewes levels by, 245.
— his description of the recent strata in the valley of the Ouse, 275.
Map, explanation of the, 304.
Marine and fresh-water strata, alternations of, how formed in the delta of the Ganges, 277.
Marine deposits, imbedding of fresh-water species in, 275.
Marine formations contain in general a great variety of species, 277.
Marine plants and animals, imbedding of the remains of, 277.
Marine testacea, imbedding of the remains of, 260.
Marine testacea, great depths at which they have been found living, 281.
Marine vegetation, 71, 78.
Marr lakes of Scotland, animals imbedded in, 251.
—- charcoal found fossilized in, 273.
Martin Meer, eight canoes found in draining, 290.
Martius on the changes which man will produce in Brazil, 148.
Maryland, account of a whirlwind in, 74.
Matilda island, its windward side highest, 293.
Meandrina, coral formed by the genus, 294.
Mediterranean, its area as compared to the African desert, 166.
Melville Island, annual migrations of animals into, 97.
Men, on the extermination of savage tribes of, by civilized colonies, 175.
—- more than 100 swept away by a river flood in Java, 250.
—- several hundreds swept away by the Nile, 253.
—- durability of the bones of, 258.
—- bones of, found in the delta of the Ganges, 258.
Mendip hills, sediment deposited during floods in the caves of, 221.
Mermaid, coral reef, 294.
Mersey, a vessel discovered in its former bed, 260.
Metallic substances, changes which some taken up from the bottom of the sea have undergone, 262.
Mhyse, a buried city in central India, 238.
Migrations, of animals, 94.
—- of cetacea, 99.
—- of birds, 101.
—- of fish, 106.
—- of insects, 113.
Migratory powers indispensable to animals to enable them to keep their ground, 159.
Mississippi, floating islands in the, 98.
—- imbedding of terrestrial plants in its delta, 243.
—- valley, wild horses very numerous in parts of the, 152.
Mélisère overflowed by lava in 1669, 237.
Monkeys trained to ascend trees, 47.
Morayshire, animals conveyed to the sea by floods in, 249.
Morea, description of the formation termed Céramique in the, 233.
Moreau, Cesar, his tables of the navigation of Great Britain, 267.
Montoire, great size of the peat moss of, 211.
Mount Conto, town buried by the fall of part of, 229.
Mount Grenier, five villages buried by the fall of part of, 229.
Mountain chains, remarks on the theory of their sudden elevation, 197.
Mules sometimes prolific, 49.
Murchison, Mr., on the recent conglomerate of Escrinet, 221.
—- on the tertiary strata of Lancashire, 306.
Nakel, a vessel and two anchors dug up near, 260.
Napier, Capt., his account of the animals destroyed by floods in Scotland, 1794, 248.
Narwal found buried in mud on the beach near Boston, 278.
—- skull of, found in recent strata in the valley of the Ouse, 276.
Nature, as defined by Lamarck, 13.
Necker supposed species could not be annihilated, 128.
Neill, his account of whales stranded at Alloa, &c., 278.
Nerbudda river, its channel cut through columnar basalt, 238.
Newfoundland, cattle often mired in the bogs of, 216.
Newhaven, valley of the Ouse recently filled up near, 275.
New Holland, mammiferous quadrupeds of, 89.
—- its native inhabitants will become extinct, 175.
—- extent of coral reefs off the coast of, 285.
Nice, formation of breccias near, 221.
Nightingale, extraordinary range of the, 101.
Nile, cities and towns buried under blown sand near the, 234.
—- several hundred men swept away by a flood on the, 253.
Nitrogen common in mineral springs, 189.
North American lakes, animals inhabiting them would be destroyed by their drainage, 168.
—- strata containing recent shells formed by the, 275.
North Cape, abundance of drift wood thrown on, 244.
Nova Scotia, account of a vessel overturned by the bore or tidal wave in, 260.
Norway, on the comparatively recent elevation of part of, 306.
Olafson, on the abundance of drift wood on the Coast of Siberia, 244.
Orang-Outang, Lamarck on its conversion into the human species, 14.
--- taught to climb trees by the inhabitants of Borneo, 47.
Organic remains, imbedded in deposits on emerged land, 209.
--- in peat, 210, 215.
--- in caves and fissures, 219.
--- in alluvium and the ruins caused by landslips, 228.
--- in blown sand, 234.
--- in volcanic formations on the land, 236.
--- in subaqueous deposits, 239.
Osseous breccias, remarks on the formation of, 292.
Otahite, an habitual volcanic vent, 291.
Ouiein, account of the buried city of, 297.
Ouse, its estuary recently filled up, 275.
--- section of the beds formed in its estuary, 276.
Owyhee, an habitual volcanic vent, 291.
Oysters, &c., thrown alive on the beach by a storm in the Forth, 280.

Pacific, animals found in the islands of the, 90.
--- volcanic islands of the, 288.
--- a great theatre of volcanic action, 290.
--- all the islands yet examined in the, are formed of coral or volcanic rocks, 290.
--- the calcareous formations of the, probably all stratified, 294.
--- subsidence greater than elevation in the, 296.
--- earthquakes felt from time to time in the, 297.
--- recent changes of level in the, 297.
--- calcareous formations in the, the most extensive now in progress, 298.
--- beds of oysters, &c., found on the coral reefs of the, 293.
--- coral very abundant in the, 285.
Panama, effects which would follow the sinking down of the isthmus of, 162.
Parasitic testacea, 287.
Paris basin, tertiary deposits of the, 305.
Paroxysmal convulsions, remarks on, 196.
Parrot tribes, their geographical distribution, 109.
Parry, Capt., on the swimming of the Polar bear, 97.
--- on the animals of Melville Island, 97.

Paviland cave, human skeleton found in, 223, 226.
Peat, its formation has not always a conservative tendency, 133.
--- on its growth and the preservation of organic and other remains in it, 210.
--- abundant in hot and humid climates, 211.
--- area in Europe covered by, 211.
--- site of ancient forests now occupied by, 206, 214.
--- human remains found in, 215.
--- its antisepctic property, whence derived, 216.
--- mosses, accounts of the bursting of, 217.
--- cattle mired in, 217.
--- animal remains in, 218.
--- submarine, 218, 278.
Penco uplifted 25 feet in 1750, 161.
Pennant on the distribution of animals, 89.
--- his account of the migrations of rats in Kamtschatka, 94.
Péron on the geographical distribution of fish, 105.
--- on the distribution of zoophytes, 111.
Persian Gulf, coral said to abound in the, 285.
Peterhead, a large whale cast ashore near, in 1682, 278.
Physical geography, effect of changes in, on the distribution of species, 160, 308.
--- changes which have taken place in, since the deposition of the older tertiary strata, (see map,) 304.
--- effects of changes in, on climate, 308.
Pigs, fortuitous acquisitions of some not hereditary, 42.
--- instances of their swimming to great distances, 92.
--- the carcasses of some found entire at Dulverton in digging a well, 216.
Piz, fall of the mountain of, 229.
Plants, varieties in, produced by culture, 32.
--- extent of variation in, 33.
--- influence of soil on the colour of the petals of, 34.
--- agency of the wind in the fructification of, 55.
--- their geographical distribution, 67.
--- effect of climate, &c., on their distribution, 68.
--- number common to the old and new world, 69.
--- distinct provinces of indigenous,
Plants, in islands, 70, 127.
— agency of the winds in the dispersion of, 73.
— form of the seeds of some freshwater, 75.
— on the dispersion of cryptogamic, 75.
— agency of rivers and torrents in the dispersion of, 76.
— absence of liquid matter in the seeds of, 77.
— their migrations aided by islands, 77.
— agency of animals in the distribution of, 78.
— diffused by birds, 80.
— agency of man in the dispersion of, 82.
— causes which determine their stations, 131.
— equilibrium among, kept up by insects, 132.
— elements found in, 138.
— which contribute to the formation of peat, 210.
— imbedding of the remains of terrestrial in subaqueous deposits, 240.
— drifted from the tropics to Iceland by the gulf stream, 243.
— their lighter parts drifted out to sea by hurricanes, 244.
— on the number that are now becoming fossilized, 245.
— freshwater, imbedding of the remains of, in subaqueous strata, 272.
— marine, imbedding of the remains of, 277.

Playfair on the formation of vegetable soil, 168.
Pleuris, town of, and its inhabitants buried by a landslip, 229.
Po, its delta rapidly increased by embankments, 263.
Pointer, its stand probably a modification of the instinct of a wild race, 40.
Polar bears, drifted from Greenland to Iceland, 97.
— Scoresby on their numbers, 97.
— Capt. Parry on their power of swimming, 97.
— effects which may have followed their first entrance into Iceland, 144.
Pomerania, several ships found entire in the recent formations of, 260.
Pondres, human remains and extinct animals found in a cave at, 225.
Poole harbour, effects of the foundering of a vessel near its entrance, 289.
Population, human, of the globe, 148.
— changes caused by the progress of,

Port Royal, subsidence of, in 1692, 264.
Port Royal, Mr. De la Beche's remarks on the subsidence of, 269.
— Sir C. Hamilton on the submerged buildings of, 269.
Prevost, M. Constant, his division of geological causes, 209.
— on the drifting of plants by the gulf stream, 243.
Pre-occupancy the most powerful barrier against emigration, 167, 168.
Prichard, Dr., on the distinct origin of the dog and wolf, 27.
— on the unequal transmissibility of colour, &c. 52.
— on hybrid races, 52.
— on the facial angle, 61.
— on the geographical distribution of animals, 98.
— on animals found in islands, 90.
— on the distribution of the parrot tribes, 100.
— his account of Linneus's theory of the introduction of species, 124.
Progressive development, Lamarck's theory of, 11.
Pursh on the phanerogamic plants of the United States, 69.
Quadrupeds, domestic, their rapid multiplication in America, 152.
— imbedding of the remains of terrestrial, 247.
Quagga, their migrations in South Africa, 95.
Quoy, M., on the depth at which zoophytes that form coral live, 286.
Raffles, Sir S., on the training of the Sumatra baboon to ascend trees, 47.
Rain, remarks on the action of, 199.
— diminished by the destruction of forests, 200.
Rats migrate in great numbers in Kamtschatka, 94.
— involuntarily introduced by man into America, 121.
Ray, the green lizard found in Ireland according to, 103.
Reaumur on the rapid propagation of the Aphis, 135.
— on the ravages of the Gamma moth, 136.
Rein-deer, geographical range of the, 94.
— migrations of the, 97.
— imported into Iceland, 154.
Remains, human, and extinct animals found in a cave at Pondres, 225.
— found in Wokey Hole, 224.
Rennie, Rev. Dr., on the seeds of freshwater plants, 75.
Rennie, Rev. Dr., on the formation of peat, 210.
— on the recent origin of some peat-masses, 212.
— on the destruction of European forests by the Romans, 214.
— on the preservation of human remains in peat, 215.
— on sub-marine peat, 219.
Reptiles, their geographical distribution, 103.
— distinct regions of indigenous, 103.
— their powers of diffusion, 103.
— in Ireland, legend of their destruction by St. Patrick, 103.
— imbedding of the remains of, in subaqueous deposits, 246.
Retriever, M. Majendie on the faculty of the, 40.
Rhinoceroses, hundreds swept away by a river flood in Java, 250.
Rhone, a cannon imbedded in calcareous rock taken up from its delta, 262.
Richardson, Dr., on the rocky mountain sheep, 45.
— on the imbedding of drift timber in Slave Lake, 241.
— on the cause of the abundance of drift wood in the Mackenzie, 243.
River inundations, animals imbedded by, 247, 248, 253.
Rocks, their antiquity may have no connection with the period of their elevation, 309.
Rocky mountain sheep, Dr. Richardson on the, 45.
Rolander on the balance of power among species, 133.
Roman coins, &c., discovered in peat, 213.
Roseberg, 800 people destroyed by the slide of the, 229.
Rother, a Dutch vessel found buried in its old channel, 260.
Roulin, M., on acquired instincts which have become hereditary in dogs, 39.
Rousseau, alternation of coral and volcanic cinders at, 295.
Runn of Cutch, ship nails, &c., thrown out of fissures in the, 267.
Running water, igneous causes the antagonist power to the action of, 194.
Sand, drift, imbedding of organic remains, &c. in, 234.
— cities and towns in Egypt buried under, 234.
— carcasses of camels imbedded in, 235.
San Lorenzo, isle of, said to have been formed by the subsidence of the promontory of Callao, 265.
Santorin, gulf of, volcanic rocks in the lagoons of Gambier’s group like those in the, 291.
Sardinia, its flora but little known, 103.
Savanna in Mar. town of, swept away by the sea, 233.
Scotland, peat mosses of, 213.
— cattle often mired in them, 217.
— animals imbedded by floods in, 248.
— quadrupeds found imbedded in the marl lakes of, 251.
— shell marl obtained from some small lakes in, 272.
— chara found fossil in the marl lakes of, 273.
— but few species in the marls of, 277.
Scoresby, Capt., his experiments on the impregnation of wood by sea-water, 240, 261.
Sea, its ravages on low coasts during earthquakes, 232.
— sometimes fresher at great depths than at the surface, 287.
— estimate of the amount of, converted into land since the deposition of the tertiary strata, 305.
Sea-cow cast ashore near Leith, 278.
Seals, their migration, 99.
Sea-weed, large banks formed by drift, 78, 277.
Sections of coral islands, see diagrams, No. 6 and 7, 290.
Sedgwick, Professor, his theory of the antagonist power of vegetation controverted, 193.
— on eras of paroxysmal convulsion, 197.
— on the preservation of organic remains in fissures, 220.
Selside, great fissure in limestone at, 220.
Serres, E. R. A., on the changes in the brain of the fusc in vertebrated animals, 62.
Serres, M. Marcel de, on the changes which some human bones have undergone in fourteen or fifteen centuries, 225.
— on human remains in French caves, 224.
Sheep, great multiplication of in South America, 153.
Shell marl, on the formation of, in the lakes of Scotland, 272, 299.
Shells found in the calcareous marl of the Scotch lakes, 272.
Shifts or faults, ancient and modern compared, 195.
Ships, British, number annually wrecked, 254, 257.
INDEX.

Ships of war, number lost during the French war, 256.
  — several found buried in recent strata, 219, 260.
Sibbald on a turtle taken in the Orkneys, 104.
  — his account of whales stranded at Burnt island, &c., 278.
Siberia, drift timber accumulated on the east coast of, 244.
Sicily, several thousand people entombed at once by an earthquake in, 232.
Silliman, Professor, his account of a vessel overturned by the bore or tidal wave in Nova Scotia, 260.
Sindree, a new salt lake formed by subsidence in the delta of the Indus near, 266.
  — the fort of, subsided without falling, 266.
  — elevation of Ullah Bund near, 266.
Sippah, river, its course changed, 238.
Skeleton, human, imbedded at Guadaloupe, 259.
  — found in Paviland cave, 223, 226.
Slave Lake, accumulation of drift timber in, 241.
Sligo, bursting of a peat moss in, 218.
Sloane, Sir H., on the dispersion of seeds by the gulf stream, 76.
Smith, Sir J., on the propagation of plants by buds, grafts, &c., 32.
  — on the distribution of seeds by birds, 80.
Smyth, Capt. W. H., on floating islands of drift wood, 98.
  — on the drifting of birds by a gale of wind in the Mediterranean, 102.
  — on the diffusion of insects by the wind, 115.
  — on the average number of British merchant vessels lost daily, 257.
  — on the number of men of war lost from 1793 to 1829, 257.
  — found broken shells at great depths between Gibraltar and Ceuta, 281.
Smyth, Lieutenant, his account of Henderson's Island, 297.
Soll, its influence on the colours of the petals of plants, 34.
Soils, on the formation of, 188.
Solway moss described, 217.
  — a man and horse, in armour, found in, 217.
  — account of the bursting of, 217.
Solway Frith, animals washed by river floods into, 248.
Somme, peat-mosses in the valley of the, 219.
Sortino Vecchio, several thousand people entombed at once in caverns at, 292.
South America, wild horses annually drowned in great numbers in, 247.
  — recent changes of level in, 265.
Sauvignargues, human remains found with extinct animals in a cave at, 225.
Spallanzani on the effects of heat on the seeds of plants, 77.
  — on the flight of birds, 102.
Species, definition of the term, 2.
  — Linnaeus on the constancy of, 3.
  — Lamarck's theory of the transmutation of, 3.
  — insufficiency of the arguments in favour of the transmutation of, 18.
  — causes of the difficulty of discriminating, 21.
  — causes of variability in the same, 24.
  — extent of known variability in, 26.
  — variability of a, compared to that of an individual, 36.
  — extent of change in, 37.
  — inferences as to their reality in nature, 64.
  — laws which regulate their geographical distribution, 66.
  — theories respecting their first introduction, 123.
  — proposal of an hypothesis as to their first introduction, 124.
  — effects which would result from the introduction of single pairs of each, 126.
  — Brocchi on the extinction of, 128.
  — Rolander on the balance of power among, 133.
  — reciprocal influence of aquatic and terrestrial, 138.
  — their successive destruction part of the order of nature, 141.
  — effect of the extension of the range of, 142.
  — power of exterminating them no prerogative of man, 156.
  — influence of inorganic causes in changing their habitations, 158.
  — effect of changes in physical geography on their distribution, 160, 308.
  — their successive extinction part of the economy of nature, 168, 176.
  — effect of changes of climate on their distribution, 169, 308.
  — influence of climate in causing one to give way before another, 172.
  — barriers which oppose their distribution, 172.
  — remarks on the conversion of one into another, 174.
  — their local distribution, 176.
Species, their recent origin, or antiquity, may be equally consistent with their distribution, 177.

— speculations on the appearance of new, 179.
— on the time which might be required for the extinction of one mammiferous, 182.

Specific character, permanence of the, 18.

Spence, Mr., on the number of instincts of the common bee, 58.
— on the distribution of insects, 113.
— on the rapid propagation of some insects, 135.
— on the devastation caused by ants in Grenada, 137.

Spitzbergen, bays filled with drift wood in, 244.

Spix, M., on the changes which man will produce in Brazil, 148.

Springbok, or Cape antelope, migrates in vast herds, 96.

Springs, mineral, in the Mediterranean, 287.

Squirrels, migrations of the common, in Lapland, 94.

St. André destroyed by a landslide, 229.

St. Andrew’s, a gun barrel found in the sands near, with shells attached to it, 263.

St. Domingo, fragments of vases, &c., found at a depth of twenty feet in, 259.

St. Katherine Docks, a vessel found buried in excavating them, 260.

St. Patrick, tradition of the destruction of the Irish reptiles by, 103.

St. Vincent, account of the arrival of a Boa-constrictor on drift wood in the island of, 104.

Stalagmite alternating with alluvium in French caves, 222.

Stations, of plants, description of, 69.
— of animals, circumstances which constitute them are changeable, 141.
— of animals and plants, causes by which they are determined, 130.

Staveren, isthmus burst through, 165.

Storm of February, 1831, in the estuary of the Forth, effects of, 280.

Stratton, Mr., his account of buried temples in Egypt, 234.

Subaqueous strata, imbedding of aquatic species in, 272.

Subaqueous vegetation, 72, 78.

Submarine forests, remarks on the formation of, 268.

Submarine peat, found in Holland, 278.
— formed on the English coast, 278.

Submersion of land by earthquakes, effects of the, 264.

Subsidence, effects which would result from, in some places, 162.
— of Port Royal in Jamaica, 264, 269.
— of the quay at Lisbon, 264.
— of part of the promontory of Calloa, 266.
— in the delta of the Indus, 266.
— in Sumbawa, 269.
— of the North American lakes, 275.
— greater than elevation in the Pacific, 296.
— and elevation, effects of alternate, 307.

Subterranean action, our knowledge of it yet in its infancy, 195.

Sumbawa, subsidence in, 269.

Superior, lake, strata containing recent shells formed by, 275.

Sweden, shells of recent species found at great heights in, 306.

Switzerland, towns destroyed by landslips in, 229.

Tamin, its occurrence in peat, 216.

Temples in Egypt buried under blown sand, 234.

Teredo navalis, introduced into Holland on the bottoms of ships, 122.

Terra del Spirito Santo, the island of, an habitual volcanic vent, 291.

Terrestrial species, imbedding of the remains of in subaqueous deposits, 239.

Tertiary strata, changes which have taken place in physical geography since their deposition—see Map, 304.

Testacea, their geographical distribution, 107.
— causes which limit the extension of many species, 108.
— great range of some species of, 108.
— some kinds capable of existing without air or nourishment for long periods, 100.
— their powers of diffusion—see Diagram, No. 1, 111.
— but few species of in fresh-water formations, 277.
— burrowing, secured from the ordinary action of the waves and currents, 290.
— marine, depths at which they have been found living, 281.
— parasitic, 267.

Thames, a vessel found buried in the alluvial plain of the, 260.

Thunder-storm in Spain, devastation caused by a, 199.

Tide, channels into the lagoons of coral islands kept open by the, 291.
INDEX.

Tides and currents, drifting of the remains of animals by, 252.
Tiedemann on the changes in the brain in the fetus of vertebrated animals, 62.
Timber destroyed by insects introduced by commerce, 192.
Tjetandoy, river, effects of a recent flood of, in Java, 250.
Tobacco, hybrids between two species of, 52.
Toomer, Mr., a pig trained to hunt by, 42.
Torrents in Catalonia, devastation caused by, 199.
Tory island, testacea found living at great depths off, 282.
Tournal, M., human teeth and fragments of pottery found in a cave by, 224.
Towns destroyed by landslips, 229.
Travertin formed in Forfarshire lakes, 273.
— chara found fossil in, in Scotland, 273.
— cypris found fossilized in, 275.
Trimmer, Mr., his discovery of tertiary strata in Wales, 306.
Tropics, recent fresh-water formations of the, not yet examined, 278.
Turtles migrate in droves, 104.
— sometimes taken on the English coast, 104.
Turton on the drifting of wolves out to sea on ice, 97.
— his account of a turtle taken in the Severn, 104.

Ullah Bund elevated in 1819 in the delta of the Indus, 266.
— section which it exhibited when cut through by the river, 267.
Ulhoa on the multiplication of the ass in Quito, 153.
— on the destruction of goats in Juan Fernandez, by dogs, 154.
Universal formations, remarks on, 196.
Universal ocean, theory of, disproved, 124.

Val d’Arno, effect of the destruction of forests in the upper, 198.
Valley del Bove, description of the—(see Frontispiece,) 303.
— dikes numerous in the, 303.
— dip of the volcanic beds in the, 303.
Valparaiso, recent alterations of level caused by earthquakes at, 205.
Variability, cause of, in the same species, 24.
Variation in plants produced by horticulture, extent of, 33.

Vegetable soil, why it does not increase on the surface, 188.
— formed in part by absorption from the atmosphere, 189.
Vegetation, centres of, discordance of the opinions of botanists concerning, 177.
— no counterpoise to the levelling power of water, 190.
— force which it exerts compared to the action of frost, 193.
— its conservative influence, 198.
— its influence on climate, 200.
Vermont, timber imbedded by the bursting of a lake in, 228.
Vernon, Mr., on organic remains found at North-Cliff, Yorkshire, 226.
Vessel, effects of the foundering of one off the mouth of Poole Harbour, 259.
— account of one overturned by the bore or tidal wave, in Nova Scotia, 260.
Vessels, several found buried in recent formations, 260.
— manner in which they may become preserved in subaqueous strata, 261.
Vesuvius, people destroyed by volcanic alluvions on, 236.
Vicissitudes in the distribution of land and sea since the commencement of the tertiary era, 303.
Vicramaditya, Rajah, cities in Central India overwhelmed in the time of the, 237.
Vidal, Captain, testacea found living at great depths by, 282.
Villages and their inhabitants buried by landslips, 229.
Ville Deux, breccia with land shells now forming at, 220.
Virginia, account of the destruction of Elk island by a river flood in, 250.
Vitality, effects produced on the earth’s surface by the powers of, 185.
— these most extensive in subaqueous regions, 186.
Volcanic beds of Etna, their general dip, 304.
— cones, their perfect state no proof of their relative age, 199.
— formations, imbedding of organic and other remains in, 236.
— islands of the Pacific, 288.
Von Buch, his discovery of deposits of recent shells in Norway, 306.
Vultures, some species true cosmopolites, 101.

Walker, Dr., on the overturning of forests by wind, 212.
West Indian seas, absence of circular coral reefs in the, 291.
West Indies, a bed of coral found between two lava currents in the, 294.
Whales often stranded on low shores by storms, 276.
Wheat, Lamarck on the origin of the cultivated, 6.
—— answer to Lamarck’s objection as to its native country, 31.
—— found in the Egyptian tombs, 31.
Whirlwinds, dispersion of seeds by, 74.
White, Mr. Ch., on the regular gradation in man, &c., 61.
White, Rev. Mr., on a shower of Aphides, 114.
White Sea, its connexion with the Gulf of Finland, 306.
Whitsunday Island, description of—see wood-cut, No. 5, 289.
Wiegmann on hybrids between the dog and wolf, 51.
—— on hybrid plants, 53.
Wildeke on the agency of birds in the diffusion of plants, 80.
—— on the manner in which an equilibrium is kept up among plants, 132.
Wildenow on the diffusion of plants by man, 83.
—— on centres of vegetable creation, 177.
Wind, forests sometimes overturned by the, 212.
Winds dispersion of seeds by the, 73.
—— their velocity, 74.
Windward side of coral reefs, on the cause of the superior height of the, 294.

Wokey Hole, human remains found in, 224.
Wolf and dog distinct species, 27.
—— hybrids between the, 51.
Wolves frequently drifted out to sea on floating ice, 97.
—— extirpated in great Britain, 149.
Wood, Mr., on the migrations of the wild ass, 95.
Wood instantly impregnated with salt water when sunk to a great depth, 240.
—— on the imbedding of drift, 241.
—— probably converted into lignite more rapidly under great pressure, 261.
Wood-grouse extirpated in England within fifty years, 150.
Wreck, changes which some articles thrown up from a, had undergone in thirty-three years, 262.
Wrecks, average number of per year, 254, 257.
—— manner in which they may be preserved in subsaqueous strata, 255.

Zoological provinces, how formed, 125.
—— why not more blended together, 127.
Zoophytes, their geographical distribution, 111.
—— their powers of diffusion, 112.
—— engaged in the construction of coral reefs, 294.
—— their operations compared to plants which generate peat, 263.
Zostera marina, submarine peat formed from the, 278.

END OF THE SECOND VOLUME.
LONDON:
PRINTED BY WILLIAM CLOWES,
Stamford Street.
