Foundations Series — Classical Genetics
Series Editor: Robert J. Robbins

The ESP Foundations of Classical Genetics project has received support from the ELSI component of the United States Department of Energy Human Genome Project. ESP also welcomes help from volunteers and collaborators, who recommend works for publication, provide access to original materials, and assist with technical and production work. If you are interested in volunteering, or are otherwise interested in the project, contact the series editor: rrobbins@fncrc.org.

Production Credits

Typesetting: ESP staff
Proofreading/Copyediting: ESP staff
Graphics work: ESP staff
Copyfitting/Final production: ESP staff
PUBLICATIONS

OF

ALFRED H. STURTEVANT

1891 – 1970

Federley's breeding experiments with the moth Pygaera. American Naturalist, 46: 565-568.

1913 The linear arrangement of six sex-linked factors in Drosophila, as shown by their mode of association. Journal of Experimental Zoology, 14: 43-59.

The Himalayan rabbit case, with some considerations on multiple allelomorphs. American Naturalist, 47: 234-238.

1915  The behavior of the chromosomes as studied through linkage.  

*The Mechanism of Mendelian Heredity.* (with Morgan, T. H.;  

No crossing over in the female of the silkworm moth.  

A sex-linked character in *Drosophila repleta.*  

Experiments on sex recognition and the problem of sexual  

Castle and Wright on crossing over in rats.  
*Science,* 42: 342.

1916  Notes on North American Drosophilidae with descriptions of  
twenty-three new species.  *Annals of the Entomological Society  
of America,* 9: 323-343.

1917  Genetic factors affecting the strength of linkage in *Drosophila.*  
*Proceedings of the National Academy of Science,* 3: 555-558.

Crossing over without chiasmatype?  
*Genetics* 2: 301-304.

1918  Acalypterae (Diptera) collected in Mobile County, Alabama.  

A synopsis of the Nearctic species of the genus *Drosophila* (Sensu Lato).  
*Bulletin of the American Museum of Natural History,* 38: 441-446.

Flies of the genus *Drosophila* as possible disease carriers.  
*Journal of Parasitology,* 5: 84-85.

An analysis of the effects of selection.  *Carnegie Institution of  

A parallel mutation in *Drosophila funebris.*  
*Science,* 48: 72-73.

1919  A new species closely resembling *Drosophila melanogaster.*  
*Psyche* 26: 153-155.

Inherited linkage variations in the second chromosome.  
307-341.

ESP FOUNDATIONS SERIES

1920

1921

1922

1923

*Laboratory directions for an elementary course in genetics.* (with Morgan, T. H., H. J. Muller and C. B. Bridges) H. Holt Co. 16 p.

The linkage relations of certain genes in *Oenothera*. (with Emerson, S.) *Genetics*, 17: 393-412.

The comparative genetics of *Drosophila pseudoobscura* and *D. melanogaster*. (with Tan, C. C.) *Journal of Genetics*, 34: 415-432.

1939 *An Introduction to Genetics*. (with Beadle, G. W.), W. B. Saunders Co. 391 p.

*Classical Genetics*

Thomas Hunt Morgan. Anatomical Record, 95: 480-481.

Caltech's Division of Biology is nineteen years old. Engineering & Science Monthly, 10: 6.

A map of the fourth chromosome of Drosophila melanogaster, based on crossing over in triploid females. Proceedings of the National Academy of Science, 37: 405-407.

Nearctic flies of the family Periscelidae (Diptera) and certain Anthomyzidae referred to the family. *Proceedings of the U. S. National Museum*, 103: 551-561.
